

Physics-inspired coarse-scale perturbation

Phase 3 ablation: target the parameters at wavelengths $\lambda \gtrsim 3000$ km (upper synoptic and above). A different mechanism per model, same physical objective.

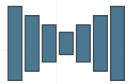

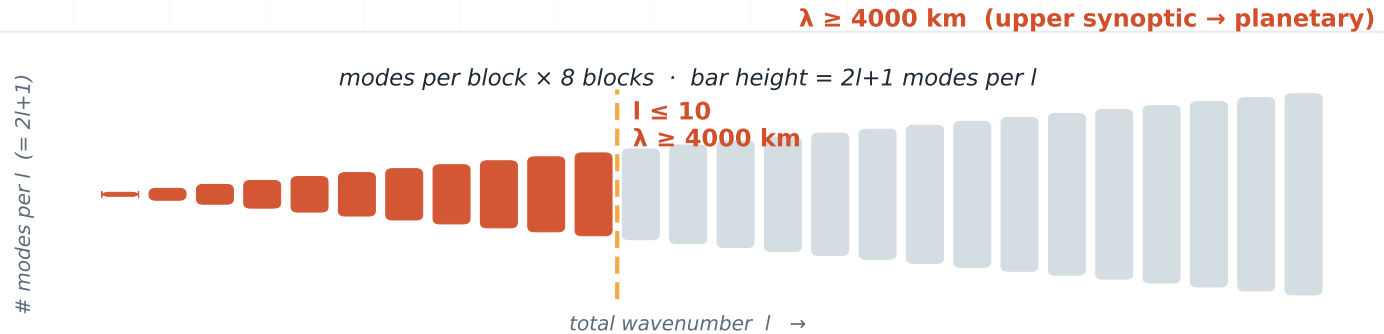

SFNO

Spherical Fourier Neural Operator

Mechanism:
spectral weight sub-slice perturbation

Target slice:
 $l \leq 10$ modes of every block's filter weight

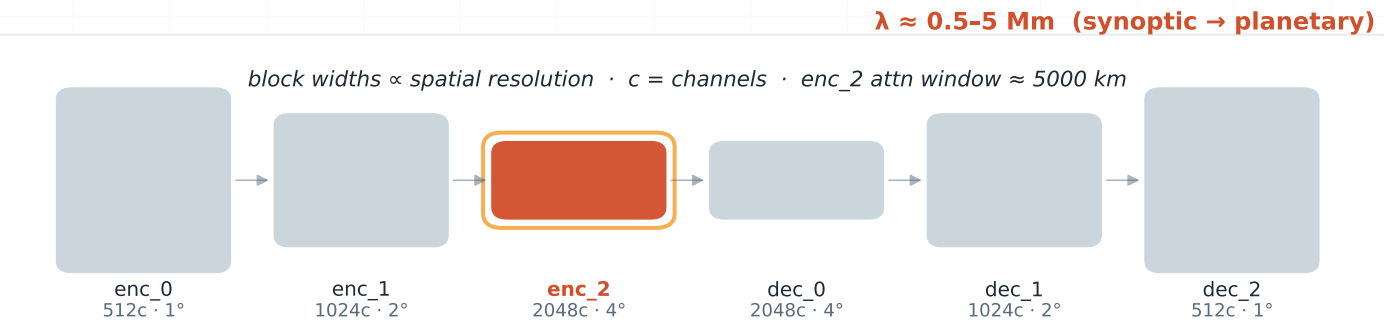

Aurora

Swin-Transformer 3D U-Net

Mechanism:
U-net-bottom weight perturbation

Target slice:
encoder_layers.2 only

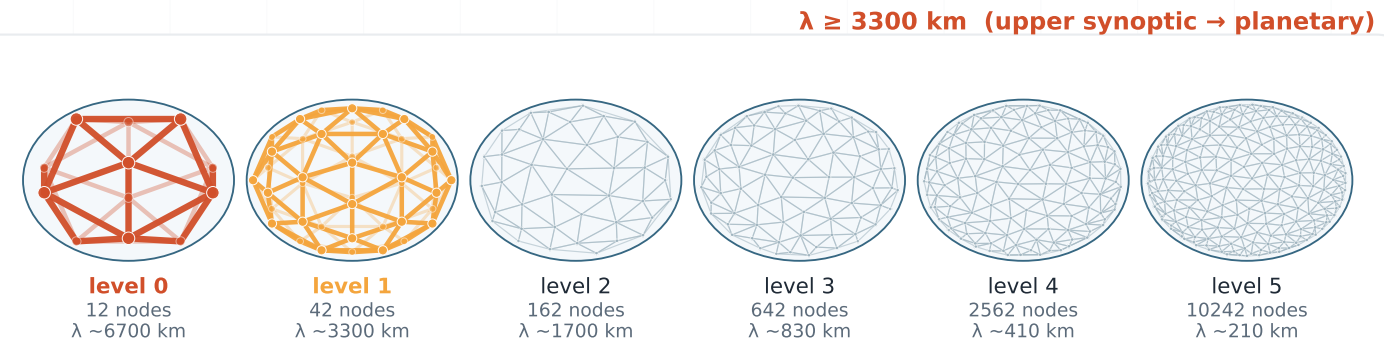

GraphCast

Multi-Mesh Graph Neural Network

Mechanism:
activation hook on coarse mesh nodes

Target slice:
first 42 mesh nodes (levels 0-1)

● targeted (perturbed) ● intermediate scale ● untouched (small-scale)
